PROJECTS

Smart Edu Hub
- The Smart Edu Hub Application is a desktop-based program developed in Java designed to facilitate the creation, delivery, and assessment of quizzes for students. This application operates entirely offline, ensuring accessibility in environments with limited or no internet connectivity.

Stock Price Prediction
- The Python Stock Price Prediction Application is a desktop-based program developed using Python that predicts future stock prices by analyzing historical stock data. The application utilizes machine learning algorithms to identify patterns and forecast stock trends. It operates offline, using pre-downloaded datasets for model training and prediction.

Electricity Bill Calculator
- The Electricity Bill Calculator Application is a desktop-based program developed using C program that calculates the monthly electricity bill for a user based on their electricity consumption and the predefined traffic rates.

Website for Restaurant
- Developed a responsive restaurant website using HTML, CSS, and JavaScript.
- Designed a user-friendly interface with intuitive navigation, ensuring easy access to restaurant information and seamless interaction with features such as the table reservation form and contact/enquiry form.
